ENVIROSTRIP #3—PRODUCT INFORMATION

ENVIROSTRIP #3—PRODUCT SPECIFICATIONS

Midway Industrial Supply's Envirostrip #3 product is a user and environmentally friendly (no Methylene Chloride) stripping formulation that can be used cold or hot to strip all liquid and powder coatings:

1. Stripping time will vary depending on the temperature used, the thickness of the coating, and the type of coating to be removed— suggested temperature range, if product is heated, is 140-175°F.
2. When used in a bath situation, agitation of the solution is helpful in speeding up the removal process, but is not mandatory.
3. Product can, if desired, be ordered with an oil "seal" that floats on the surface of the liquid to reduce evaporation, odor, and dragout when used in a heated tank.
4. Product should be used full strength and is multi-metal safe, provided it's kept free of water contamination—water is an enemy of this product and should be kept out of the bath, or it will lose its effectiveness rapidly.
5. Bath life can be extended indefinitely by proper maintenance of the bath, including the following steps: filtration or other means of removing stripped coatings, particularly those containing soft metal particles (most coatings will simply lift from the substrate and fall to the bottom of the bath); occasional addition of fresh product to account for dragout and small evaporative losses; periodically allowing the bath to become cooled and static to allow dissolved material fall out of solution to the bottom of the bath for removal
6. Product is available in quantities including 5 gallon, 55 gallon and bulk containers.
